

Architecture Day

Year 9 Design Technology pupils at Bryn Hafren Comprehensive School participated in a specialist workshop for their annual Architecture Day. The girls took part in a day full of cross curricular activities that included learning about bridges and their structures, Mathematics and Design Engineering.

Ben Frost of Art Reflections talked to the girls about local history and famous skyscrapers whilst giving the girls the skills needed to make trusses from bamboo and elastic bands to make bridges in the first part of the work shop. The girls also learnt how to important team work is in order to make their truss successful.

For the afternoon session the girls unleashed their creativity to design and make mega skyscrapers using only bamboo canes and elastic bands.

As you can see the imagination and artistic flair is as strong as ever at Bryn Hafren. Mr D. Oliver, Head of Design Technology said “The creativity of our pupils continues to be one of our strengths here. The girls never cease to amaze me with their ideas and their determination to make them succeed. Today’s workshop demonstrates some of the talent and potential in our pupils”.
